

E-Z Warehouse Manager

THE EASY, COST-EFFECTIVE WAY TO MANAGE YOUR WAREHOUSE FOR GREATER PROFITS AND EFFICIENCY

PSSI's *E-Z Warehouse Manager* makes it easy to manage inventory and expedite picking and shipping with greater efficiency. E-Z WMS operates as a standalone warehouse management system while also linking to the Sage Pro ERP system for full-circle integration from warehouse to accounting. It can

import sales orders, create packing lists for the day's shipments, allocate inventory, scan units and bins, and expedite shipping and invoicing, while allowing for a wide variety of stocking units.

Best of all... a complete *E-Z Warehouse Manager* system including hardware, software, training, customization and 'go-live' assistance sells for less than half the cost of most "name" WMS systems. And yet our users tell us it's quick to install and learn; it's modifiable to conform to *your* unique requirements; and it will integrate with your Sage Pro ERP accounting right out of the box.

- **Easy to Install and Learn**
- **Lower Cost to Implement**
Than Competing Systems
- **Customizable** to Your Unique
Warehouse Needs
- **Built-in Integration** With
Sage Pro ERP Accounting
- **Easy to Spot** Purchasing and
Receiving Errors
- Utilizes **Web-Based**
Handhelds for Accuracy

E-Z Warehouse Manager

About PSSI

For over two decades, the team at **Productivity Strategies & Solutions, Inc.** has been helping companies across the nation improve operations and profits by aligning their I.T. strategies with their business goals.

Located in the heart of the Midwest, PSSI specializes in manufacturing and distribution solutions aimed at companies that want to grow.

We do this by providing *several* distinct, world-renown Enterprise Resource Planning systems, and then using our highly experienced and credentialed tech teams to implement solutions that save our clients money, enhance their customers' experiences and improve their bottom lines.

Since 1987, we've helped hundreds of companies manage better through automation — as documented by our dozens of client Case Studies.

To learn more about how PSSI can save your firm money, improve operations, bolster customer service and grow your business, contact us directly at any of the numbers below.

Product Summary

E-Z Warehouse Manager is a standalone warehouse management system with the ability to link to the **Sage Pro ERP (TM)** accounting and inventory system (links to other accounting systems are planned).

E-Z WMS solves many of the problems typically confronted by warehouse managers: mis-shipments... loss of inventory... time wasted searching for product... misplaced inventory... late deliveries... poor order fulfillment accuracy... reporting difficulties... and so on. The system allows for *real-time* access to warehouse information and enables careful management of key business metrics.

E-Z WMS is a Windows-based software application developed exclusively by PSSI that utilizes intelligent handheld scanners linked wirelessly (via network access points, or routers) to a Windows-based web server. The use of common hardware, Microsoft Windows compliance, a web interface and the intuitive look and feel of E-Z WMS make the system quick to install, easy to implement, and very cost effective.

In fact, our research shows that the overall installation costs associated with E-Z WMS are generally *less than half the costs* of other warehouse systems. The system has proven faster to learn (and thus become productive) than any other system we've seen.

While E-Z WMS maintains its own separate inventory database of your warehouse, the product has been developed to integrate with the Sage Pro ERP system. Simply put, this means that Sage Pro users gain the added benefit of rapid inventory validation comparisons between E-Z WMS and Sage Pro. This permits either warehouse or accounting to quickly spot and correct any discrepancies, via exceptions. No more combing through extensive inventory reports trying to find and fix anomalies: only the errors show up, making inventory reconciliation and correction a snap!

An added benefit of this inventory comparison capability is that cycle counts of an entire warehouse can be accomplished with speed and ease. And with our newest version of E-Z WMS, we've added the ability to ship and/or bill either from the warehouse or from accounting (using Sage Pro's logic), depending on user preferences and privileges.

E-Z WMS eliminates the paper-chase too often associated with managing a warehouse, while providing key employees with information on multiple work centers that allows them to manage better.

And best of all, E-Z WMS users have achieved improved inventory turns and created more 'build to order' opportunities, with faster movement from order to fulfillment, resulting in significant time and labor savings — just one more way to help *your* bottom line.

E-Z Warehouse Manager supports multi-level pack sizes by item which include user-defined specifications for Quantity, Weight and Cube size. Optional serial and lot number tracking are also supported on each item throughout the warehouse, as well as item barcoding.

E-Z Warehouse Manager

What Users Say...

"E-Z WMS allows us to run our operation with as few as one-sixth the number of employees our competition uses!"

"The speed at which our warehouse team was able to learn to use the system was another plus. I can teach someone all they need to know to use the system to pick orders in about fifteen minutes."

"E-Z WMS has virtually eliminated our misshipments. The discipline required by the system in picking, packing and shipping makes the process faster and provides a much higher degree of accuracy than was possible prior to this deployment."

"We have significantly improved our ability to compare inventory levels to our accounting inventory, thus allowing for complete cycle counts of the entire warehouse at the touch of a button."

"We're realizing improved inventory turns. With E-Z WMS, we can schedule shorter production runs, create more 'build to order' opportunities and enable faster movement from order to shipment. We just couldn't do those kinds of things without it!"

"E-Z WMS has eliminated all the spikes in our inventory counts. It has reduced mistakes, sped up shipping and made a major difference in our comfort level at year-end. It's unbelievable the difference it has made in a year."

"We've gained more than a 25% increase in order ship rates while total warehouse staff has actually decreased."

"Without this software, our shipping could never have kept up with our sales increases."

"We feel twice as secure due to the system's checks and balances. The accounting matches the WMS, or at worst we can quickly identify and correct the variances."

Hardware Requirements

- For Host Web Server: A Windows-based workstation running Windows IIS
- Wireless Network Access Points (wireless routers)
- Wireless Handhelds (recommend Dolphin 95xx)
- For WMS Manager Console: A standard Windows-based workstation
- Label Printer and Laser Printer

To learn more about how **E-Z Warehouse Manager** can improve *your* warehouse operations, contact PSSI to schedule a **FREE** preliminary consultation and software demonstration.

Learn how you can gain the benefits of an efficiently automated warehouse management system for **less than half the cost** of other WMS systems.

And if you are a user of **Sage Pro ERP** accounting systems, ask about our unique integration with Sage Pro, and why other Sage Pro users have turned to PSSI's warehouse management solution to improve their bottom lines! Call today:
